THE POWER OF CHANGE. TECHNOLOGY AND ENERGY

Dot Networks has been operating within the **Maneks Group** since December 2023.

For more than a decade, we have been one of the leaders as a system integrator and digital performer in Serbia and the region.

We provide professional consulting, design, implementation, integration, and maintenance services in the following areas:

- Radio communications
- Passive optical networks
- ICT infrastructure and Data centers
- Technical security and automatic management systems
- Renewable energy sources

With 500 employees, our organization takes care of design, construction, integration, and other services, enabling clients to focus on what matters most to them and their core business.

SERVICES

Radio Communications

We deliver turn-key solutions and services, including planning, construction and maintenance of access networks. This covers the installation, implementation and maintenance of radio access networks, as well as the construction of base stations and antenna towers. We offer network management services and radio networks optimization (drive tests and post-measurement report generation), as well as OMC services. The design of access networks implies the design of telecommunication facilities, which includes the development of architectural and construction, electrical and telecommunication projects.

Passive Optical Networks and Access System

We deliver turn-key solutions and services, including design, construction and maintenance of fiber-optic and copper-based FTTx access and backbone networks, comprising of all steps from conceptual design to usage permit, including all necessary construction and installation works and equipment delivery.

ICT Infrastructure & Data Center

We provide clients with turnkey services and solutions in various IP network domains, including design, integration, maintenance and consulting services. We cover the entire portfolio of Data Center, Enterprise, ISP and Mobile IP infrastructure, with experience in multi-vendor environments. We offer our services to large companies, as well as to users from middle and SOHO domains.

We offer our knowledge and services on projects related to data centers, including design of enterprise IT infrastructure, planning, delivery of equipment, implementation and supervision of data centers (servers, data storage, virtualization, infrastructure recovery solutions and resumption of operation after unforeseen events, cloud services), technical support and maintenance and management services.

We provide complete installation, testing and commissioning, maintenance, active and passive duty, as well as technical support to clients in the areas of different transport networks (DWDM/OTN and SDH).

Life Safety, Security, Building Automation and Management System

End-to-end solutions in Life Safety, Security, Building Automation, and Management Systems. Providing risk assessment, planning, design, implementation, and maintenance, as well as management and optimization of energy efficiency. The world of state-of-the-art sensors and IoT by global-leading partner network, resulting in smart solutions for smart living and businesses

Industrial Automation

Managing the complexity of production processes through systems for Industrial automation and the Internet of Things. The in-house expertise in Industrial Automation over years of successfully delivered projects, ranging from preliminary studies and initial designs towards engineering, project implementation, and final commissioning with systems in full operation.

PERFORMANCE

ROBOTIC

Through in-house synergies in design and build, powered by international experience, newest technology, and applications as well as solar power systems, implementing digital towers and rooftops by the latest telecommunications standards. Custom-designed locations for mobile and Wi-Fi networks, smart city solutions, and other connectivity-providing clients.

Renewable Energy Solutions

Portfolio of design and construction of **solar power plant services**, reducing customers' carbon footprint. Innovative plug-and-play solutions and dedicated solar engineering consultancy. The quality of the service meets all market demands.

Education & Training

Accredited training center
Engineer of the future
Practice program

The **Dot Networks Training Center** provides training to the highest OHS standards, both for domestic and foreign markets. We are the only ones in Europe accredited for the training and licensing of Safety LMS, which provides the opportunity to work in the US market. Candidates for work at height receive comprehensive information and education, and through practical work, they are trained to work in all markets of Europe, Africa, Asia, and America where telecommunication services are developed and provided.

Our Academy of Knowledge has four most modern training programs:

- Training for implementation of OHS measures when working at height with industrial rope in industrial vertical environments
- Training for implementation of OHS measures when working on lattice structures
- Training for installation and maintenance of TC equipment and devices
- Training for evacuation and rescue from industrial and urban vertical environments

More than 200 trained and ready candidates have passed through our Academy of Knowledge in the last few years, and we can be proud that it is the most modern training center in Serbia and beyond.
